

**In the Claims**

1. (Original) A compactor wheel mountable on an axle of a compaction machine, said compactor wheel comprising:
  - a hub mountable to an axle of a compaction machine;
  - a rim mounted around the outer circumference of said hub, said rim having a face and an inner circumferential edge and an outer circumferential edge;
  - a plurality of compaction cleats circumferentially spaced on, transversely spaced across and mounted to said face of said rim; and
  - an axle guard system comprising a cleat-free area formed circumferentially around said rim on said face and extending widthwise from said inner edge across said rim toward said outer edge at least about the width of one of said cleats.
2. (Original) The compactor wheel as set forth in claim 1, wherein said axle guard system further comprises at least one circumferential barrier mounted on said cleat-free area so as to extend above said face.
3. (Original) The compactor wheel as set forth in claim 2, wherein said at least one circumferential barrier is mounted on said cleat-free area so as to extend radially outward from said face.
4. (Original) The compactor wheel as set forth in claim 2, wherein said at least one circumferential barrier is mounted on said cleat-free area adjacent said inner circumferential edge of said rim.
5. (Original) The compactor wheel as set forth in claim 2, wherein each of said cleats has a height, and said at least one circumferential barrier extends above said face a height greater than the height of said cleats.
6. (Twice Amended) A compactor wheel mountable on an axle of a compaction machine having a body suitable for compacting refuse, said compactor wheel comprising:
  - a hub mountable to an axle of a compaction machine;

a rim mounted around the outer circumference of said hub, said rim having a face and an inner circumferential edge and an outer circumferential edge;

a plurality of compactor wheel cleats circumferentially spaced on, transversely spaced across, and mounted to the face of said rim in a given orientation; and

an axle guard system comprising at least one circumferential barrier extending above said face and adjacent said inner circumferential edge of said rim and located in an area absent any of the compactor wheel cleats in the given orientation, wherein said compactor wheel is suitable for supporting the body of a compaction machine.

7. (Original) The compactor wheel as set forth in claim 6, wherein said at least one circumferential barrier extends radially outward from said face.

8. (Original) The compactor wheel as set forth in claim 6, wherein said at least one circumferential barrier comprises a ring-shaped wall.

9. (Canceled)

10. (Canceled)

11. (Amended) The compactor wheel as set forth in claim [10]6, wherein said at least one circumferential barrier includes buttressing structure for support.

12. (Original) The compactor wheel as set forth in claim 11, wherein said buttressing structure is a broadening of said at least one circumferential barrier at said face of said rim.

13. (Canceled)

14. (Twice Amended) A compaction machine comprising:  
a body suitable for compacting refuse, said body having opposite sides;  
an axle having two ends and mounting said body; and  
a compactor wheel mounted on each end of said axle, one compactor wheel on each side of said body, each said compactor wheel comprising:

a hub mounted to one end of said axle,  
a rim mounted around the outer circumference of said hub, said rim having a face, an inner circumferential edge adjacent to one side of said body and an outer circumferential edge,

a plurality of cleats circumferentially spaced on and mounted to said face of said rim, and

an axle guard system comprising [at least one] a circumferential barrier extending above said face and adjacent said inner circumferential edge of said rim, wherein the circumferential barrier has a face that is substantially perpendicular to the axle.

15. (Amended) The [compactor wheel] compaction machine as set forth in claim 14, wherein said at least one circumferential barrier comprises a ring-shaped wall.

16. (Amended) The [compactor wheel] compaction machine as set forth in claim 14, wherein said at least one circumferential barrier comprises a plurality of circumferentially spaced fins.

17. (Amended) The [compactor wheel] compaction machine as set forth in claim 16, wherein said compactor wheel has an inner row of said cleats mounted adjacent to said inner circumferential edge, one of said fins is mounted to said rim between each pair of adjacent cleats forming said row.

18. (Amended) The [compactor wheel] compaction machine as set forth in claim 17, wherein said at least one circumferential barrier includes buttressing structure for support.

19. (Amended) The [compactor wheel] compaction machine as set forth in claim 18, wherein said buttressing structure is a broadening of said at least one circumferential barrier at said face of said rim.

20. (Amended) The [compactor wheel] compaction machine as set forth in claim 14, wherein said axle guard system further comprises a cleat-free area formed circumferentially around said rim on said face and extending widthwise from said inner edge across said rim

toward said outer edge a distance, said at least one circumferential barrier being mounted on said cleat-free area.

21. (Canceled)

22. (Canceled)

23. (Twice Amended) A compaction machine comprising:

a body suitable for compacting refuse, said body having opposite sides;

an axle having two ends and mounting said body; and

a compactor wheel mounted on each end of said axle, one compactor wheel on each side of said body, said compactor wheel comprising:

a hub mountable to said axle;

a rim mounted around the outer circumference of said hub, said rim having a face, an inner circumferential edge adjacent to one side of said body, and an outer circumferential edge;

a plurality of tooth-shaped compaction cleats circumferentially spaced on, transversely spaced across and mounted to said face of said rim; and

an axle guard system comprising a cleat-free area formed circumferentially around said rim on said face and extending widthwise from said inner edge across said rim toward said outer edge a distance to reduce refuse accumulation about the axle of the compaction machine.

24. (Canceled)

25. (Twice Amended) A compaction machine comprising:

a body suitable for compacting refuse, said body having opposite sides;

two axles, each axle having two ends and mounting said body; and

a compactor wheel mounted on each end of each of said axles, each said compactor wheel comprising:

a hub mountable to said axle;

a rim mounted around the outer circumference of said hub, said rim having a face, an inner circumferential edge adjacent to one said of said body, and an outer circumferential edge;

a plurality of compaction cleats circumferentially spaced on, transversely spaced across and mounted to said face of said rim; and

an axle guard system comprising a cleat-free area formed circumferentially around said rim on said face and extending widthwise from said inner edge across said rim toward said outer edge for reducing movement of cable, ropes, or wire refuse inward toward said inner circumferential edge of said rim.

26-28. (Canceled)

29. (Amended) The compaction machine as set forth in claim 23, wherein said cleat-free area extends widthwise from said inner edge across said rim toward said outer edge up to about 10 inches.

30. (Canceled)

31. (Canceled)

32. (Canceled)

33. (New) A compactor wheel mountable on an axle of a compaction machine having a body suitable for compacting refuse, said compactor wheel comprising:

a hub mountable to an axle of a compaction machine;

a rim mounted around the outer circumference of said hub, said rim having a face and an inner circumferential edge and an outer circumferential edge;

a plurality of compactor wheel cleats circumferentially spaced on, transversely spaced across, and mounted to the face of said rim in an orientation that is substantially parallel to the axle of the compaction machine; and

an axle guard system comprising an area free of the plurality of compactor wheel cleats and at least one circumferential barrier extending above said face and adjacent said inner circumferential edge of said rim in an area of said rim absent any of the cleats in the given

orientation, wherein said compactor wheel is suitable for supporting the body of a compaction machine.

34. (New) A compactor wheel mountable on an axle of a compaction machine having a body suitable for compacting refuse, said compactor wheel comprising:  
a hub mountable to an axle of a compaction machine;  
a rim mounted around the outer circumference of said hub, said rim having a face and an inner circumferential edge and an outer circumferential edge;  
a plurality of compactor wheel cleats circumferentially spaced on, transversely spaced across, and mounted to the face of said rim; and  
an axle guard system comprising at least one circumferential barrier extending above said face and adjacent said inner circumferential edge of said rim, wherein said compactor wheel is suitable for supporting the body of a compaction machine, and wherein said at least one circumferential barrier comprises a ring-shaped wall.

35. (New) A compactor wheel mountable on an axle of a compaction machine having a body suitable for compacting refuse, said compactor wheel comprising:  
a hub mountable to an axle of a compaction machine;  
a rim mounted around the outer circumference of said hub, said rim having a face and an inner circumferential edge and an outer circumferential edge;  
a plurality of compactor wheel cleats circumferentially spaced on, transversely spaced across, and mounted to the face of said rim; and  
an axle guard system comprising at least one circumferential barrier extending above said face and adjacent said inner circumferential edge of said rim, wherein said compactor wheel is suitable for supporting the body of a compaction machine, wherein said at least one circumferential barrier comprises a plurality of circumferentially spaced fins, and wherein said compactor wheel has an inner row of said cleats mounted adjacent to said inner circumferential edge, one of said fins is mounted to said rim between each pair of adjacent cleats forming said row.

36. (New) A compactor wheel mountable on an axle of a compaction machine having a body suitable for compacting refuse, said compactor wheel comprising:  
a hub mountable to an axle of a compaction machine;

a rim mounted around the outer circumference of said hub, said rim having a face and an inner circumferential edge and an outer circumferential edge;

a plurality of compactor wheel cleats circumferentially spaced on, transversely spaced across, and mounted to the face of said rim; and

an axle guard system comprising at least one circumferential barrier extending above said face and adjacent said inner circumferential edge of said rim, wherein said compactor wheel is suitable for supporting the body of a compaction machine, and wherein said axle guard system further comprises a cleat-free area formed circumferentially around said rim on said face and extending widthwise from said inner edge across said rim toward said outer edge at least about the width of one of said cleats, said at least one circumferential barrier being mounted on said cleat-free area.
